THE FACTORS AFFECTING STUDENTS LEARNING MOTIVATION

The article analyzes the main reasons of unsuccessful learning. One of them is the lack of student learning motivation. Learning motivation is the main tool to improve the students progress. Exceptional attention is given to the discussion on inner and outer motives of learning motivation. Also a person's needs are discussed as the main elements of motive formation. Learning motivation becomes weaker because of the monotony of satisfying the needs, this is why different needs strengthening ways are introduced. The aim of the research was to evaluate the factors directly affecting student learning motivation. The results of the research show that most often unsuccessful learning is caused by unfair evaluation of the teachers.

Key words: learning motivation, unsuccessful learning, progressive students, students not good at studies, who do not attend school regularly, students who have behavior problems, students who have low learning motivation.

Objectives.

1. To discuss the importance and effect of learning motivation on student learning results by analyzing pedagogical and psychological literature.
2. To analyze pedagogical and psychological assumptions that can decrease student learning motivation.
3. To evaluate the factors directly affecting student learning motivation.
